

The smartest way to charge your battery!

Just a few steps separate you from the perfect charging result!

- Download the LiON app and check whether your battery can be charged with the LiON
- Acquire through your dealer or our Amazon store the right charger for your battery
- Set up the app with a few clicks
- Transfer the data from the app to the charger
- Connect your battery to the charger ... and let's charge!

Data transfer from mobile to LiON

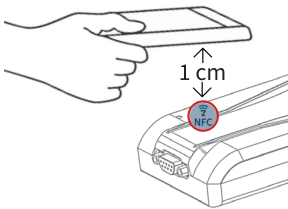

1. Connect the power plug

2. Guide the mobile device slowly and with a little distance over the NFC antenna of the LiON.

Hold the phone steady, don't "wipe or iron back and forth."

The transfer starts. Hold the phone steady until the transfer is finished (2-3 seconds) and the green tick appears.

3. In case of failure:

- Check whether the NFC function is activated and available in your mobile phone.
- The phone shown in the video is an iPhone (NFC antenna is on the top left), mobile from other manufacturers may have the NFC antenna positioned elsewhere, please check the position on your mobile at the manufacturer's website.
